

# Driving for cleaner air.

## Air1® What is AdBlue®?

*AdBlue is a very pure, aqueous, solution of urea which meets the automotive industry specification defined by ISO 22241. It is a clear liquid similar in appearance to water.*

AdBlue is safe to handle and use; it is not explosive, flammable, toxic, or subject to any hazardous product regulations such as ADR. The product can be purchased in 10 litre Cans, 210 litre Drums, 1 000 litre Intermediate Bulk Containers (IBC's) and can also be supplied in bulk by road tanker.

Storage facilities can be tailored to suit customer needs allowing for the usual precautions to prevent spillage into nearby drains and watercourses. AdBlue has an official shelf life of 12 months if the stipulated storage conditions are observed. However, AdBlue that has been stored for longer than 12 months may still be perfectly usable and simply needs to be analysed to check that it still conforms to the AdBlue specification.

Yara has formed a partnership with Europe's largest distributor, Brenntag, to ensure a guaranteed supply of AdBlue throughout Europe under the brand name Air1. Air1 is a unique concept developed by Yara to ensure a secure supply of the high-quality AdBlue needed in your Selective Catalytic Reduction (SCR) system.

Air1 is increasingly available at public filling stations, truckstops, automatic filling stations, home depots, chemical distribution depots and most major truck manufacturers' dealerships. Yara's partnership with Brenntag, offers you the most efficient and economic AdBlue supply. With a comprehensive distribution network of more than 100 sites, Air1 is never far away from your depot. Air1 can also offer tank level monitoring using telemetry, technical services, operator instruction and flexible financing arrangements.

AdBlue is not subject to any tax or duty apart from VAT.
