1. Risk factors

All investments in interest bearing securities have risk associated with such investment. The risk is related to the general volatility in the market for such securities, varying liquidity in a single bond issue as well as company specific risk factors. The Bonds may not be a suitable investment for all investors. Each potential investor in the Bonds must determine the suitability of that investment in light of its own circumstances. In particular, each potential investor should have sufficient knowledge and experience to make a meaningful evaluation of the Bonds, the merits and risks of investing in the Bonds. An investment in the Bonds entails significant risks and is suitable only for investors who understand the risk factors associated with this type of investment and who can afford a loss of all or part of its investment.

The main risks, in the view of the Issuer, related to these specific bonds are described below. Risks related to the Issuer are described in the Registration Document, dated 10.03.2022.

RISKS RELATED TO THE BONDS

Credit risk

Credit risk is the risk that the Issuer fails to make the required payments under the Bonds (either principal or interest) pursuant to the obligations in the Bond Terms. In case of a bankruptcy, the bondholder risk losing its entire investment, and settlement of any potential dividend will not take place until the bankruptcy proceedings have been completed.

Liquidity risk

There is a risk that no efficient or liquid market will develop for the bonds. Lack of demand for the bonds may result in a loss for bondholders.

The price of a single bond issue will fluctuate in accordance with the interest rate and credit markets in general, the market view of the credit risk of that particular bond issue, and the liquidity of this bond issue in the market. In spite of an underlying positive development in the Issuer's business activities, the price of a bond may fall independent of this fact.

Interest rate risk

The bonds carry a fixed rate not varying with changes in interest rate levels, there is a risk that subsequent changes in market interest rates may adversely affect the value of the bonds. Typically, a rise of interest rate for equivalent bonds in the market will result in a drop in the value of the bond.

Market risk

There is a risk that the value of the Bonds will decrease due to the change in market conditions. The price of a single bond issue will fluctuate in accordance with the interest rate and credit markets in general, the market view of the credit risk of that particular bond issue, and the liquidity of this bond issue in the market. In spite of an underlying positive development in the Issuer's business activities, the price of a bond may fall independent of this fact. Bond issues with a relatively short tenor and a floating rate coupon rate do however in general carry a lower price risk compared to bonds with a longer tenor and/or with a fixed coupon rate.

No market-maker agreement is entered into in relation to this bond issue, and the liquidity of the Bonds will at all times depend on the market participants view of the credit quality of the Issuer as well as established and available credit lines.
