# Introduction

## **Patent marking: Turning ideas into intellectual property**

For Yara, protection of our knowledge and ideas by way of intellectual property, especially in the form of patents, designs and trademarks, is necessary to grow in today's competitive world. We turn our knowledge and ideas into intellectual property assets allowing Yara to increase its competitiveness in different ways.

Our goal is to ensure that the company draws maximum benefit from its own innovative and creative capacity, establishes profitable partnerships with other patent holders and avoids making unauthorized use of technology owned by others.

This virtual patent marking overview is made available to provide you useful notice under the patent laws of the United States of America (35 U.S.C. § 287 (a)) and other countries/regions and offers selected patent information about Yara products. Not all products are included, and not all patent information about each Yara product is necessarily provided here. Yara products may also be covered by one or more patents in countries/regions other than the U.S. and Europe, and additional patent application(s) may be pending. Yara products may be sold individually or as part of a process, system, combination product or service, and the associated patent numbers would apply in both cases. This information is subject to change without notice.
